

# Telehealth

## COVID-19 Response

The coronavirus (COVID-19) has communities on high alert, and VISTA's clinicians are on the front lines caring for patients and supporting our healthcare partners. Now and always, the health and well-being of patients, clinicians and hospital staff is our top priority. As part of these efforts, VISTA has implemented a point-to-point video solution that will enable clinicians to see patients virtually.

### What will you need?

- Our telehealth technology is designed to run on any tablet or phone with either iOS (8+) or Android (4+)
- Web extension works on browsers Firefox and Chrome (Chrome is recommended)
- To establish a session, a video and audio-capable device is required

### Why Telehealth?

#### No shared air space

Telehealth enables clinicians to see patients virtually, without sharing the same air space, reducing their risk for contagion.

#### HIPAA compliant

Our telehealth technology is fully HIPAA compliant.

#### Easy to use

Telehealth can be accessed on a simple desktop or personal device.

#### No interference with IT systems

Our telehealth technology will not interfere with your facility's IT system; it is a direct, point-to-point video solution.
